Hangloose Filter

Our CSUMB inspired filter Hangloose is sure to brighten your day! To create our filter we used built in JES functions addRectFilled() to create our sign, addText() to add text to our sign. To create the seagulls in the air we used addArc() function and to create our warm sun we used the addOvalFilled(). The sand was made using layers and iterating grit(which implemented dots on our sand) over x and y coordinates on the lower part of our picture.

Welcome to CSUMB!!!
